Oil and Gas Industry

Mo-Star Communications is a full service Oil and Gas remote communications service provider. Established in 1996, Mo-Star has grown into one of the leading oilfield communications providers. Mo-Star now operates throughout Texas, Louisiana, Colorado, Wyoming and a select group of foreign countries across three continents. Now serving the Oil and Gas, Construction, Maritime, and Disaster Recovery industries, Mo-Star is able to provide world class communication services in the most demanding environments. Additionally, Mo-Star utilizes best-in-class equipment and employs the most experienced communication professionals.

Companies around the globe rely on Mo-Star to maximize productivity, security and safety in challenging remote environments. Mo-Star provides a complete range of enterprise level communications technologies including: satellite communications, intercom systems, 2-Way Radio, custom WIFI solutions, industrial peripheral solutions, video conferencing, office to field voice/data integration, and VPN solutions. Furthermore, Mo-Star provides bandwidth delivered via private line services, providing full seamless custom voice and data integration to your network.

Whether it's a land rig or offshore, Mo-Star provides client specific, high speed communications to allow for maximum work optimization. Mo-Star has partnered with proven, WITSML compliant equipment providers to ensure compatibility to all rig or platform output instrumentation, unequalled quality of service and maximum up-time. Some of the largest and most progressive energy companies in the world depend on Mo-Star's technology and expertise for far-reaching and critical communications capabilities. All solutions are backed by the most experienced technical support and engineering team in the industry. Finally Mo-Star is driven by an unequalled dedication to our clients. A select list of Mo-Star's clients is available through Mo-Star's sales associates.
